Breathalysers New Zealand creates and distributes world-leading alcohol breathalysers. We are 100% NZ owned and operated and the country's only specialist breathalyser company. We have the local knowledge to give you expert product application advice for your Workplace or Personal use alcohol testing requirements. Our products are some of the most recognised brands and models of breathalysers in the world today. We lead the way with alcohol breath testing innovations. Our development focus targets two critical areas of continual improvement: 1. Research and development of fuel cell sensor technology. 2. IT infrastructure to support developments around breathalyser hardware and connectivity. Our Workplace Use range is suitable for the NZ transport, construction, manufacturing, corporate, and mining industries. We are heavily committed to Occupational Health & Safety and work with companies that need to be compliant to keep their staff and visitors safe. We also help these companies stay updated with health & safety legal requirements. Our Personal Use range gives accurate results to help make informed decisions about alcohol consumption. Our devices cater to all situations, whether going out for dinner or ensuring family members are safe to where alcohol has become a problem, such as custody, rehabilitation, and legal issues. These principles have allowed us to be the first in the world to offer breath testing technological advances such as Bluetooth connectivity, trans-dermal alcohol monitoring, and photo identification compliance.
