Cenforce, in general, is a brand of medications used to treat erectile dysfunction (ED), and it contains sildenafil citrate as the active ingredient. Sildenafil is a phosphodiesterase type 5 (PDE-5) inhibitor that helps increase blood flow to the penis, facilitating the ability to achieve and maintain an erection during sexual stimulation. If Cenforce 120 is a new formulation or dosage introduced after my last update, I recommend consulting with a healthcare professional or checking the prescribing information provided by the manufacturer for the most accurate and up-to-date information. They can provide guidance on the appropriate dosage based on individual health factors and the severity of erectile dysfunction. As with any medication for erectile dysfunction, it's essential to use it under the supervision and guidance of a qualified healthcare professional. They can assess your health, provide appropriate recommendations, and monitor for potential interactions with other medications you may be taking. If you have specific questions about Cenforce 120 or any other medication, discussing them with your healthcare provider is the best course of action. <https://www.arrowmeds.com/product/cenforce-120mg/>
