Create a Profitable Freelance Website with Our Upwork Clone Script

Negotiable

👤 Freelance Marketplace Script to Build a Custom Freelancer Clone

📍

Our Upwork clone script is feature-rich, user-friendly, affordable, and licensed. It's a complete package that you need to get started with your freelance marketplace. Built with Native PHP and the latest script development techniques, it is bug-free, highly scalable, and does not require much maintenance. Its top-of-the-line features include: ? Simplified Log-in Facility: Our script allows your users to create their accounts and log in to your freelance website easily. In fact, they even log in through their social media accounts. ? Project Type: Employers can post two types of projects: fixed & hourly ? Project Milestone Payment: In the case of fixed projects, freelancers can get partial payment from the clients after reaching completing a project milestone. ? Built-in Messaging System: Freelancers and clients can communicate with each other smoothly and share files through the chat system. ? Real-time Notification: The freelance website share notification with the users, keeping them updated about new job postings, bid acceptance, and other relevant details. ? Escrow Payment: The payment is kept held, its released once a project is accomplished successfully. Our script supports full customization, so you can tailor it the way you want! On top of that, it comes with in-installation support! Our tech team helps upload it on your hosting server in just 24 hours!
