Photo framing is the process of enclosing a photograph or artwork within a frame to enhance its presentation, protect it from damage, and create a focal point for display. Framing can add aesthetic value to the photograph, complement the style of the image, and make it more visually appealing. Choose a frame that complements the photograph and the space where it will be displayed. Consider factors such as the color, material, style, and size of the frame. Common materials for frames include wood, metal, and plastic.
