Pick & Place Robot Arm Manufacturer from China: High-speed Pick & Place Robot Arms for Plastic Molding Machine to increase molding productivity, reduce errors. High-speed pick and place robots are applicable to many types of horizontal injection machines and vertical injection molding machines for products and sprues take-out. They move products from one location to another with spot-on operation. In this way, manual errors like placing the wrong product in the wrong place can be corrected. That benefits particularly for the production of small items and gadgets. Besides, manufacturing efficiency and accuracy can be greatly improved with the help of a pick and place robot. - Facilitate human-machine collaboration - A 10-30% increase in productivity - Reduce manual errors - Improve efficiency and accuracy - Prevent injuries - Reduce manufacturing cost
